General Description.

This line, in running east from the Uintah Special Meridian passes over in the First Range East, the "bad lands", a broken, mountainous district with little vegetation or water. Range Two East is mostly elevated rolling hills with good grass but little water and no timber. The fraction of Range Three East contains some excellent agricultural lands about the Uintah River.

NOTE. In prolonging the First Standard Parallel South through Range 2 East I found it had been previously run and marked; but the corners were from 53 to 57 chs. too far west. The cor. for Tp. 4 S. Ro. 2 & 3 E. being W. of my Cor. 57. chs. & north of it 132 lks. This Cor. was marked by a triangular shaped stone, 14 x 12 x 10 ins, with 6 notches on the N., E. & W. edges. in a stone mound 2 ft. dia. at base & 15 ins. high on slope of stony hill down to S. E. I destroyed these monuments when found.

General Description.

The Standard Parallel through Range 1 West traverses a very broken & low district of country. But the land both North & South of it improves, & much of it is valuable for grazing & cultivation purposes. Through Range 2 West, a better class of land is found and it contains good cattle

First Standard Parallel South West Principal Base.

	ranges. Range 3 West contains some broken & mountainous country; but generally there is good grass, & at seasons considerable water in the numerous small creeks. In this township, sec. 31 there is a narrow valley of fine agricultural land & a living stream brought at. Range 4 West is a red cedar district, valueless, except for fuel, much of it being scraggy & dead. There is some good grazing land along the sandy creeks & ridges.

General Description.

The First Guide Meridian prolonged from the Standard Parallel South, thence North to the Du Chesne River runs over a country covered with cedar timber on broken mountain ridges with a general bearing to the north & north east and has but little value either for agricultural or grazing purposes. From the bottom lands of the Du Chesne, thence north through township 3 S. R. 4 W. it traverses a fair district of country, after which it enters in Township 2 South a rough, mountainous country with cedar covered ridges of bluff ascent, & cut by ravines which [illegible] a general bearing down to east

and north-east. The timber is of little value being scraggy & stunted red cedar.
Township 1 South contains much excellent grazing land & fine ranges for stock. It is generally level & has considerable cedar timber. Lake Fork, a principal branch of the Du Chesne, cuts it nearly diagonally from the North-west to the south-east. There are a few secs. of excellent arable lands.
The line through Township 1 North runs over a country at first somewhat broken & covered with cedars & then comes out to open prairie, covered by sage brush & good grass, undulating. The northerly portion first crosses the West branch of Lake Fork & ascends towards the Uintah Mts. The end of the line so far as run being well up on a spur of mountains. I found two excellent springs near the line, one of which is white sulphur of good quality. The lands E. & W. are of excellent quality & adapted for agricultural purposes. The north portion of Township 1 North Ranges 4 & 5 W. are well covered by white pine timber of large size & excellent quality.

General Description.

For three miles West from my starting point, the line runs over a nearly open Country, scattering, scrubby cedars, sage brush, crosses several ravines, one water Course in which I found a small amount of running water.

Then commences the ascent of the high ridges overlooking Uintah Valley covered with dense growth of cedars, broken by numerous steep ridges, deep ravines.

The crest of the ridge is 40 chs E of the corner to Tps 1 North Ranges 2 & 3 West.

The land in Tps 1 North Range 2 West appears very rugged & poor in quality in the Western portion, but fairly good in the Eastern.

The same may also be said of Tps 1 South Range 2 West. Thence the line going West passes mainly through dense cedar growth with a few narrow open valleys, & crosses numerous steep and rocky ridges.

The country North and South is rough & broken & poor in quality. One spring of water was found in the Western portion of Tps 1 S. Range 3 West, flow of about 3 gallons per minute.

Through Range 4 West the line descends gradually towards Lake Fork, and the land is fertile, with Excellent grass & growth of cedars & sage brush.

Crossing Lake Fork it ascends a very long & steep bluff, thence for the remainder of the line passes over a rich and beautiful Country, undulating & covered with Excellent grass until within 18 chs of the 36th mile from the Special Meridian, it breaks down abruptly towards Rock Creek.

The Townships on both sides of the line are fertile and present every natural advantage for agricultural purposes.

In Tps 1 N. Rs 4 & 5 W. I found several springs 2 of sulphur

List of names.

A list of the names of the persons Employed by O. H. Mayer, U. S. Surveyor, to assist in running, measuring and marking the lines and corners described in the foregoing field notes of the survey of the Extension of the Uintah Principal Base from the corner of Townships 1 North Ranges 1 and 2 West of the Uintah Special Meridian to the corner of Townships Nos 1 North Ranges Nos 5 & 6 West in the Territory of Utah, showing the respective capacities in which they were Employed.

 Township 1 North Range 4 West of Uintah Me

General Description

This Township is divided into three parts by the East & West branches of Lake Fork, the principal tributary of the Du Chesne River. The S. E. block of sections is high rolling and mountainous land with cedar glades & open land covered with a heavy growth of sage brush & & & bunch grass.

To the North the country rises toward the Uintah Mountains and broken by two main lines of ridges, all covered with thick and luxuriant grass. (bunch)

Secs. 1. 2. & 3 have scattering heavy pine timber. On the Eastern side of the East Branch of Lake Fork the land breaks down steeply to the stream.

The central portion of the Township is marked on the South by three prominent hills covered with cedar & pinion pine, thence the land rises by a succession of ridges trending Southerly to the mountains covered with & & & bunch grass. Sections 4 & 5 have a considerable growth of heavy pine timber.

The S. W. portion of the Township is all open with fine bunch grass.

Some springs of sweet water & one of sulphur.

General Description

This Township is divided almost diagonally by Lake Fork one of the principal tributaries of the Duchesne River a rapid flowing mountain stream which rises from five lakes in the Uintah Mountains with a general width of 150 links & flows through a narrow valley.

That portion of the Township lying East of this stream is a high undulating table land, sloping gently to the South West & is clothed with an abundance of nutritious bunch grass & is the principal pasturage land of the Indians. The soil of this part of the Township is an average of good quality & with irrigation would be made very productive. The valley of the Creek is fine arable land needing no irrigation, but densely covered with underbrush & also considerable Aspen & a sparse growth of pines & red cedars.

The Western portion of the Township is a less valuable district, still contains much good grazing lands, although broken & mountainous. There is much Red cedar & some pine.
