Lines in black run by Chas. F. Moore, U. S. Transitman.

Line in red run by Elmer L.Smith, U. S. Transitman.

T. 27 S., R. 20 W.

TEST OF INSTRUMENTS.

Survey commenced June 13, 1923, and executed with Young & Sons solar transit No. 8570, used by Chas. F. Moore, U. S. Transitman, and Young & Sons solar transit No. 8589, used by Elmer L. Smith, U. S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided with two double verniers, placed opposite to each other, and reading to single minutes of arc, which is also the least count of the declination arc, latitude arc, and the vertical circle. Unless otherwise specified all lines were run in meridians, established with the solar attachments.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 2, 1923, Conditional upon satisfactory field test.

June 5, 1923 in our camp in sec. 22, T. 27 S., R. 19 W., Salt Lake Base and Meridian, in aproximate latitude 38° 27' 30" N., and longitude 113° 53' W., I examine the adjustments of both instruments, Nos. 8570 and 8589, and correct all errors. I compare the solar apparatus by their indications hourly with the meridian established by Polaris observation as follows:

At the same station, June 5, 1923, at 3h 23m 45s a.m. by my watch, which is 3om 2os fast of local mean time, I observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a hub firmly driven in the ground, 10 ons. N.

Azimuth of Polaris at eastern elongation is 1° 25' 8".

The observation was taken with Young & Sons solar transit No. 8570, used by Chas. F. Moore.

June 10, 1923, at the same station, I lay off 1° 25' 8"

...the west, and mark the point in the meridian thus determined with a nail in a hub driven firmly in the ground, 10 chains N. of our station.

June 10, 1923, at the same station, at 8h Om a. m. apparent time, with instruments No. 8570, used by Chas. F. Moore, and No. 8589 used by Elmer L. Smith, in the meridian, we set off 38° 27' 30" N. on the latitude arcs, and 22° 59' N. on the declination arcs, and determine meridians with the solar attachments, which we find to agree with the true meridian.

At apparent noon, using Young & sons solar transit, No. 8570, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb, and the transit of the sun's W. limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's E. limb.

| | |
|---|---|
| Mean observed altitude | 74° 31' 30" |
| Reduced latitude | 38° 27' 30" |
| Mean watch time of observation | 12h 37m 42s |
| Watch fast of local mean time | 38m 39s |

At apparent noon with both instruments in the meridian and the latitude arcs unchanged, we find the reading of the declination arcs to be 22° 59' N., which agrees with the computed declination of the sun

At 4h Om p.m. apparent time, with the latitude arcs unchanged, we set off 23° 0½' N., on the declination arcs and determine meridians, with the solar attachments, which we find to agree with the true meridian.

As all of the solar observations made during the usual hours of solar work come within 1' of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

For final test of instruments, at the completion of the survey of this township, see field notes of T. 26 S.,

T. 27 S., R. 20 W.

R. 19 W., under heading of Test of Instruments.

MEASUREMENTS.

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes, 5 chs. in length, compared with a Lufkin standard steel tape, one chain in length, and found to be correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

RESURVEY OF THE UTAH-NEVADA STATE BOUNDARY LINE.

From the 202 mile cor. on the Utah-Nevada State Boundary line, described in the field notes of T. 28 S., R. 20 W., Group 97.

North, on a resurvey line on 202d mile.

79.89 Fall 84 lks. E. of the 201 mile cor., which is a cottonwood post, 3 ft. long, 3 ins. in diam., marked and witnessed as described by the Surveyor General. As evidences of this cor. would be hard to find in a short time, alongside of post I

Set an iron post, 3 ft. long, 3 ins. in diam., 28 ins. in the ground, for 201st mile cor., with brass cap marked

201

N. | U.

1923

and raise a mound of stone, 2 ft. base, 1½ ft. high, W. of the post.

The true bearing of this line is N. 0° 36' W., and the distance is 79.89 chs.

From the 201st mile cor.

GENERAL DESCRIPTION.

This fractional township consists of rolling and broken bench land, and has a general drainage to the

General Description

Chains

SW, with the exception of the land in sections one and two, which has a general drainage to the north.

The whole of the township is covered with a growth of juniper and pinon pine timber, that varies in density from very scattering to heavy, and a medium growth of sagebrush undergrowth. There is a medium stand of bunch grass that affords fair grazing for cattle or sheep, but as there are no water supplies on this land, it is best adapted for winter range.

The soil consists of a sandy clay loam, which may be termed as second rate.

There are no settlers on this township, and no improvements.

No indications of coal, oil or mineral.

## CERTIFICATE OF UNITED STATES ~~SURVEYOR~~ TRANSITMEN.

We, Chas. F. Moore and Elmer L. Smith, in the capacity of

~~I~~, U. S. Transitman ~~U. S. Surveyor~~, hereby certify upon honor that, in pursuance

of special instructions received from the U. S. Surveyor General for Utah

bearing date of the 31 day of March, 1921, ~~I~~ we have well, faithfully, and truly

in ~~my~~ our own proper person~~s~~ and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the Resurvey of the Utah-Nevada State Boundary Line between the 195th. and 202nd. mile corners and the Survey of the North Boundary and Subdivision of T. 27 S., R. 20 W.

of the Salt Lake Base and Meridian, in the State of Utah, which are represented in the foregoing field notes ~~and~~ and plat diagram as having been executed by ~~me~~ us, and under ~~my~~ our direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

## APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 20 1924.

The foregoing field notes of the ~~survey~~ resurvey of the Utah-Nevada State Boundary line between the 195th and 202d mile posts; and the survey of the north boundary and subdivisional lines of Township No. 27 South, Range No. 20 West of the Salt Lake Base and Meridian, Utah;

executed by Chas. F. Moore and Elmer L. Smith

under ~~his~~ special instructions dated March 3, 1921, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys and resurveys they describe, are hereby approved.

E. A. Dameron
*U. S. Surveyor General.*

I certify that the foregoing transcript of the field notes of the above-described surveys in _____, has been correctly copied from the original notes on file in this office.

All lines ruled in blue were surveyed by Ralph Gentry, U.S. Cadastral Engineer.

All lines ruled in red were surveyed by Harold S. Paul, U.S. Transitman.

All lines ruled in yellow were surveyed by. Chas. F. Moore, U. S. Transitman.

All lines ruled in black were surveyed by Elmer L. Smith, U. S. Transitman.

Instrument Tests and Observations.

T. 28 S., R. 19 W.

Survey commenced May 17, 1923 and executed with Buff and Buff light mountain solar transit No. 8028, used by Ralph Gentry, U.S. Cadastral Engineer, Young and Sons light mountain solar transit No. 8573, used by Harold S. Paul, U.S. Transitman, Young and Sons light mountain solar transit No. 8574, used by Chas. F. Moore, U.S. Transitman, and Young and Sons light mountain sloar transit No. 8589, used by Elmer L. Smith, U. S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles. The horizontal limbs are provided with two double verniers placed opposite to each other, and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs and vertical circles.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, conditional upon satisfactory field tests.

We examine the adjustments of instruments Nos. 8028, 8573, and 8574 and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a. m. and p. m. hours, we proceed as follows:

May 17, 1923: At our camp, situated in the SW.¼ of the SE.¼ of sec. 8, T. 28 S., R. 19 W., S. L. B. and M., in approximate latitude 38° 22½' N., longitude 113° 57½' W.: At 7h. 16m. 10s. p.m., l. m. t.. I make an hour angle observation on Polaris, west of the meridian, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 5 chs. N.

| | | |
|---|---|---|
| Watch time of observation | 7h.51m.45s. | P. M. |
| Watch fast of l. m. t. | 35m.35s. | |
| L. m. t. of observation | 7h.16m.10s. | P. M. |

Azimuth of Polaris---------- 0° 53' W.

May 18, 1923, I lay off the azimuth of Polaris, 0° 53', to the east, and mark the meridian thus determined, by a tack in a peg driven firmly in the ground, 5 chs. N.

At 9h. 0m. a. m. apparent time, with instruments Nos. 8028, 8573, and 8574 in the meridian, we set off 38° 22½' N. on the latitude arcs, 19° 26' N. on the declination arcs, and determine meridians with the solar attachments, which we find to agree within 1' of the true meridian.

At apparent noon, with instrument No. 8028 in the meridian, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

| | |
|---|---|
| Mean observed altitude---------- | 71° 4¾' |
| Reduced latitude---------- | 38° 22½' N. |
| Mean watch time of observation---------- | 12h. 31m. 51s. |
| Watch fast of local mean time---------- | 35m. 35s. |

At apparent noon, with instruments Nos. 8028, 8573, and 8574 in the meridian, and with the latitude arcs unchanged, we observe the sun on the meridian, the resulting readings of the declination arcs are 19° 27½' N. respectfully, which agrees with the computed declination of the sun.

At 3h. 0m. p.m. apparent time, with the latitude arcs unchanged, we set off 19° 29¼' N. on the declination arcs and determine meridians with the solar attachments, which we find to agree within 1' of the true meridian.

As all the solar observations made during the usual hours of solar work agree within 1' of the true mer-

idian we conclude that the adjustments of the instrument are satisfactory.

I examine the adjustments of instrument No. 8589 and correct all errors, then, to test the solar apparatus by comparing it's indications resulting from solar observations made during a.m. and p.m. hours, I proceed as follows:

May 27, 1923: At the same station mentioned above, with instrument No. 8589 in the meridian, I set off 38° 22½', N. on the latitude arc, 21° 12½' N. on the declination arc, and at 9h. 0m. a.m. apparent time I determine a meridian with the solar attachment, which I find to agree within 1' of the true meridian.

At apparent noon, with the latitude arc unchanged, I observe the sun on the meridian, the resulting reading of the declination arc is 21° 13½' N., which agrees with the computed declination of the sun.

At 3h. 0m. p.m. apparent time, with the latitude arc unchanged, I set off 21° 15' N. on the declination arc and determine a meridian with the solar attachment, which I find to agree within 1' of the true meridian.

As all the solar observations made during the usual hours of solar work agree within 1' of the true meridian I conclude that the adjustments of the instrument are satisfactory.

The instruments were kept in good adjustment throughout the progress of the survey of this township, frequent tests being made on meridians determined by observations on Polaris.

For final test of instruments for the survey of this township see test of instruments at the beginning of the notes of the survey of T. 27 S., R. 18 W. for transits No. 8028 and No. 8573 and T. 27 S., R. 19 W. for transits No. 8574 and No. 8589.

Measurements.

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes five chains in length, compared with Lufkin standard steel tape one chain in length and found to be correct. The measurements are made on the slope, the vertical angles determined, and the slope measurements properly reduced to true horizontal distances.

Chains.

West boundary of T. 28 S., R. 19 W.

From the cor. of Ts. 28 and 29 S., Rs. 19 and 20 W., which is an iron post, 3 ins. diam., firmly set, marked and witnessed as described in the notes of the survey of T. 29 S., R. 19 W.

General Description

The main drainage divide in this township runs N. and S. through the E. range of sections entering the township near the SE. cor. of sec. 36 and leaving the township near the NW. cor. of sec. 1. The land to the E. of this divide drains in an easterly direction into Pine Valley and that to the W. drains in a westerly direction into Hamlin Valley. The land in the eastern and central part of the township is rolling mountainous and in the western portion, rolling bench land, sloping gently to the W.

The soil throughout the township is generally shallow. In some instances the bedrock is on, or very near, the surface. In the eastern and central portions of the township the soil is rocky and sandy and in the western part the soil is sandy and gravelly.

General Description of T. 28 S., R. 19 W.

There is a medium heavy growth of small pinon and juniper timber over the eastern and central portions of the township and in the western part, or that part embracing the rolling bench lands, the timber ranges from scattering to very thinly scattering in character.

This timber is of no value at the present time except for fire wood and a limited number of fence posts.

No evidence of mineral, coal, or oil was noted in the township.

There is a good road from Pine Valley to Hamlin Valley running across the township and several less important branch roads throughout the township.

There are four springs and three intermittent seeps in the township. Sulphur Spring, located in the NW.¼ of the SW.¼ of sec. 3, is the largest. There is a small stream of good clear water flowing from this spring. Another spring, local name unknown, is located in the NW.¼ of the NW.¼ of sec. 10. There is a small stream of good clear water flowing from this spring. Cowboy Spring, located in the SW.¼ of the SE.¼ of sec. 8, has been developed from a seep. There is a small pond, or reservoir, near this spring into which a small stream of water flows during the wet season of the year. The water in this spring is good and clear. Another spring, local name unknown, is located in the SW.¼ of the NW.¼ of sec. 36. There is a small stream of good clear water flowing from this spring. There are three small intermittent seeps in the township. One is located near the W. bdy. of the NW.¼ of the SW.¼ of sec. 25. Another is located in the SW.¼ of the SW.¼ of sec. 33 and the SE.¼ of the SE.¼ of sec. 32. The other of these three seeps is located in the SW.¼ of the SW.¼ of sec. 10 and the SE.¼ of the SE.¼

of sec. 9. These seeps flow small streams of water during the wet season, but sink below the surface of the ground during a greater part of the year.

There is no one living within the township. There is, however, a log cabin and about 160 acres of land inclosed by a well constructed barbed wire fence at Cowboy Spring. This property is used as a headquarters. The owner of this property is unknown.

The scarcity of water, the nature of the soil, and the topographical features of the land renders the lands in the township more suitable for stock grazing than for any other agricultural industry.

No magnetic declination was taken on account of the great variation, which amounts to more than 5° in one mile in some parts of the township.

CADASTRAL ENGINEER AND TRANSIT

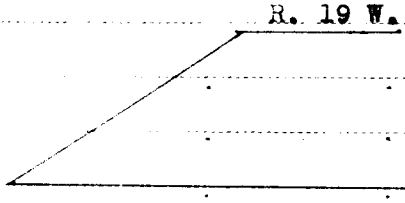
# CERTIFICATE OF UNITED STATES SURVEYOR

Ralph Gentry, U.S. Cadastral Engineer,
Harold S. Paul, U.S. Transitman,
Chas. F. Moore, U.S. Transitman,
Elmer L. Smith, U.S. Transitman,

We, ~~Elmer L. Smith, U.S. Transitman~~, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah.

bearing date of the third day of March, 1921, we have well, faithfully, and in our own proper persons and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of

the West and North boundaries and the subdivisions of T. 28 S., R. 19 W.



of the Salt Lake Base and Meridian, in the State of Utah, which are represented on the foregoing field notes as having been executed by us and under our direction; on dates shown on date diagram; and that all the corners said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes such survey.

Salt Lake City, Utah, May 20, 1924. Ralph Gentry U.S. Cadastral Engineer
Moab Utah June 6 1924 & Chas. F. Moore U.S. Transitman.
Los Angeles, Cal. June 15, 24. Harold S. Paul U.S. Transitman.
Los Angeles, Cal. June 16, 1924. Elmer L. Smith U.S. Transitman.

APPROVAL:

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,
Salt Lake City, Utah
July 31, 1924

The foregoing field notes of the survey of the North and West boundaries and subdivisions of T. 28 S., R. 19 W. of the Salt Lake Base and Meridian,

executed by Ralph Gentry, U.S.Cadastral Engineer and Harold S.Paul, Chas. F. Moore and Elmer L.Smith, U.S.Transitmen under his special instructions dated March 3, 1921 having been critically examined, and the necessary corrections and explanations made, the said field notes, and the survey they describe, are hereby approved.

U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in ....., has been correctly copied from the original notes on file in this office.

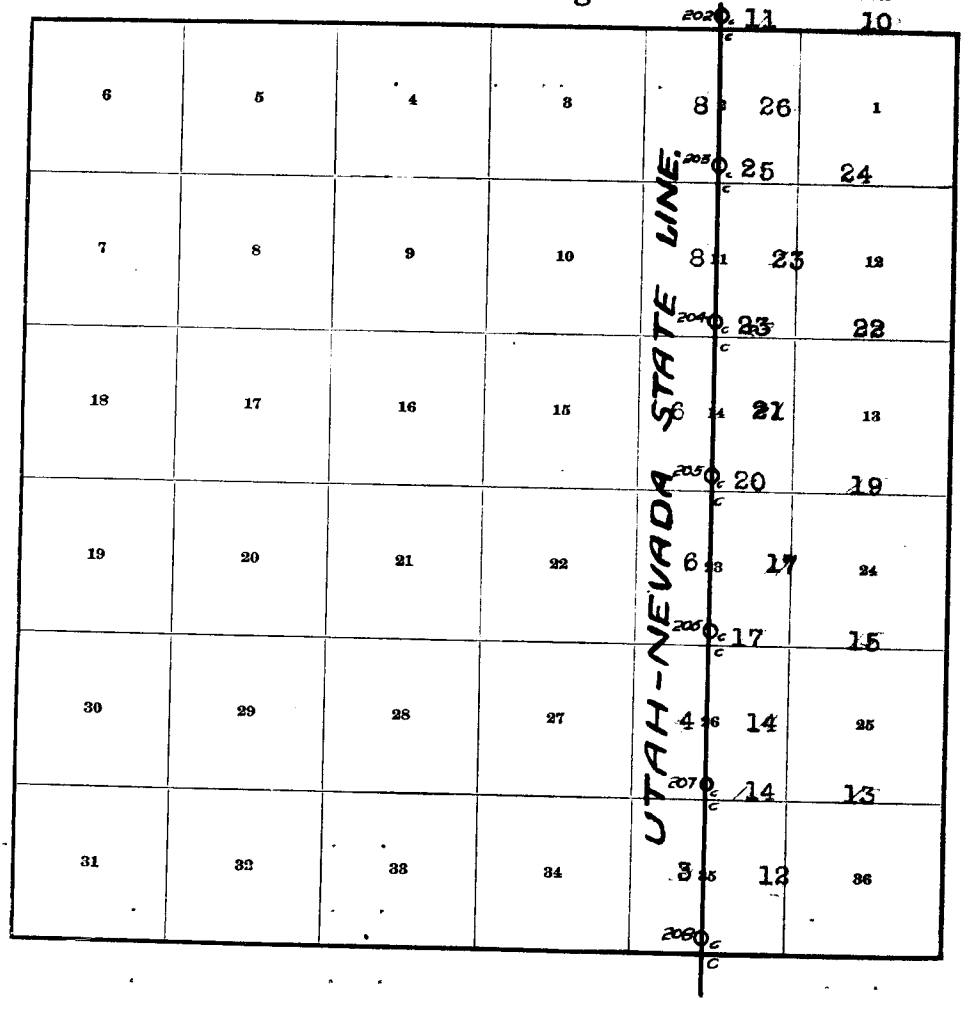
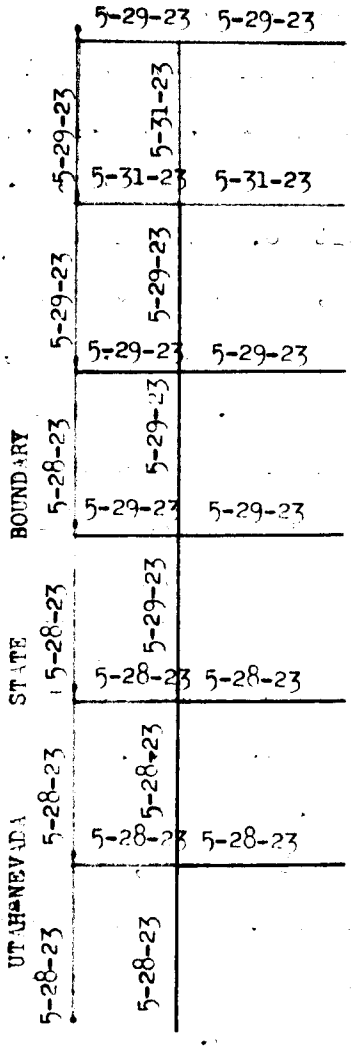
# INDEX DIAGRAM.

*Township* 28 S., *Range* 20 W.



Date Diagram of T. 28 S., R. 20 W.

Date Diagram



All lines ruled in blue were surveyed by Ralph Gentry, U.S. Cadastral Engineer.

All lines ruled in red were surveyed by Harold S. Paul, U. S. Transitman.

All lines ruled in yellow were surveyed by Chas. F. Moore, U. S. Transitman.

## Instrument Tests and Observations.

Survey commenced May 28, 1923 and executed in conjunction with the survey of T. 28 S., R. 19 W. For observation, description and peliminary test of instruments, and statement pertaining to the method used in making measurements see the notes of the survey of that township. For final test of instruments see the notes of the survey of T. 27 S., R. 18 W. for transit No. 8028, used by Ralph Gentry, U. S. Cadastral Engineer, and transit No. 8573, used by Harold S. Paul, U. S. Transitman, and the notes of the survey of T. 27 S., R. 19 W. for transit No. 8574, used by Chas. F. Moore, U. S. Transitman. The peliminary tests of instrument at the beginning of the notes of the survey of the townships above mentioned are to satisfy the requirement of a final test for the survey of this township.

General Description.

Except for a narrow strip of level bottom land along Hamlin Valley Wash the land in this township is rolling bench land and drains NE. and SW. into Hamlin Valley. The soil over the rolling bench lands is sandy clay and gravelly and that in the bottom lands is clay loam. The soil is generally very deep throughout the township. Second and third rates predominate.

There is a scattering growth of scrubby pinon and

BOOK A-468

juniper timber over a part of the township, mostly in the eastern part. This timber is of no value at the present time except for fire wood and possibly a few fence posts.

No evidence of mineral, oil, or coal was noted in the township.

There was a small stream of good clear water in Hamlin Valley Wash and also a small stream flowing east across the Utah-Nevada State line near the 206th. mile post at the time of this survey, but it is quite evident that both these streams disappear during the dry season. The approximate location of Hamlin Valley Wash by quarter quarter sections is as follows; SE.¼ Of SW.¼ of sec. 36; W.½ of NW. ¼ of sec. 36; W.½ of SW.¼ of sec. 25; SW.¼ of NW.¼ of sec. 25; E.½ and NW.¼ of NE.¼ of sec. 26; W.½ of SE. ¼ and W.½ of NE. ¼ of sec. 23.

There is a shearing plant and a small log house in the NW. corner of fractional sec. 26. The owner of this property is unknown.

The scarcity of water, the topographical features of the land, the character of the soil, and the apparent absence of minerals renders the lands in this township more suitable for stock grazing than for any other industry.

No magnetic declination was taken on account of the great variation, which amounts to more than 5° in one mile in some parts of the township.

CADASTRAL ENGINEER

# CERTIFICATE OF UNITED STATES SURVEYOR and TRANSITMEN.

Ralph Gentry, U.S. Cadastral Engineer,
Harold S. Paul, U. S. Transitman,
Chas. F. Moore, U. S. Transitman,

We [redacted], hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah bearing date of the third day of March, 1921, We have well, faithfully, and in our own proper person and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the retracement and resurvey of the Utah-Nevada State Line between the 202nd. and the 208th. mile posts and the survey of the North Boundary and Subdivisions of fractional T. 28 S., R. 20 W.

of the Salt Lake Base and Meridian, in the State of Utah, which are represented the foregoing field notes as having been executed by us, and under our direction; and that all the corners said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes such survey.

Harold S. Paul
U. S. Transitman

## APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,
Salt Lake City, Utah
July 31, 1924

The foregoing field notes of the survey of the retracement and resurvey of the Utah-Nevada State Line between the 202nd. and the 208th mile points and the survey of the North boundary and subdivisions of T. 28 S., R. 20 W. of the Salt Lake Base and Meridian,

executed by Ralph Gentry, U.S. Cadastral Engineer and Harold S. Paul and Chas. F. Moore, U.S. Transitmen.

under his special instructions dated March 3, 1921, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the survey they describe, are hereby approved.

U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in [redacted], has been correctly copied from the original notes on file in this office.

All line in black run by Ralph Gentry, U. S.
Cadastral Engineer.

All lines in red run by . S. Paul, U. S. Draftsman.

T. 26 S., R. 18 W.

Survey commenced June 22, 1923, and executed with Buff & Buff solar transit No. 8028, used by Ralph Gentry, and Young & Sons solar transit No. 8573, used by H. S. Paul. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided with two double verniers, placed opposite to each other, and reading to the single minutes of arc, which is also the least count of the latitude and declination arcs and vertical circles. Unless otherwise specified all lines were run on meridians established with the solar attachments.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 2, 1923, conditional upon satisfactory field tests.

June 2, in our camp in sec. 27, T. 27 S., R. 18 W., Salt Lake Base and Meridian, in approximate latiude, 38° 25' 30" N., and longitude 113° 48' W., I examine the adjustments of both instruments and correct all errors. I compare the solar apparatus by their indications hourly with the meridian established by Polaris observation as follows:

At the same station, at 7h 39m 45s by my watch, which is 34m 25s fast of local mean time. I observe Polaris, west of the meridian, making four observations two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, about 10 chs. N.

Watch time of observation, mean of four readings, 7h 39m 45s p.m.

Watch fast of local mean time 34m 25s.

Local mean time of observation is 7h 5m 20s.

T. 26 S., R. 18 W.

Azimuth of Polaris is 0° 36' W. of meridian.
This observation was taken with a BUff & Buff solar transit No. 8028, used by Ralph Gentry.

June 3, 1923, at the same station, I lay off 36' to the east, and mark a point in the meridian thus determined, with a nail in a hub firmly driven in the ground, 10 cms. N. of my station.

June 17, 1923, at the same station, at 8h 0m a.m., with both instruments on the meridian, we set off 38° 26' N. on the latitude arcs, 23° 22½' N. on the declination arcs, and determine meridians with the solar attachments, which we find to agree with the true meridian.

At apparent noon, using a Buff & Buff solar transit, No. 8028, I take a meridian observation of the sun for the co. latitude, observing simultaneously the [illegible] sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

| | |
|---|---|
| [illegible] | [illegible] |
| Reduced latitude | 38° 26' 35" |
| Mean mate time of observation | 12h 24m 17s |
| Mate [illegible] local mean time | 12h 24m 17s |

At apparent noon, with both instruments on the meridian and the latitude arcs unclamped, we find the reading of the declination arcs to be 23° 22½' N., which agrees with the computed declination of the sun.

At 4h 0m p.m. apparent time, with the latitude arcs unclamped, we set off 23° 22½' N., on the declination arcs and determine meridians with the solar attachments, which we find to agree with the true meridian

As all of the solar observations made during the

usual hours of solar work come within 1' of the true meridan, we conclude that the adjustments of the instruments are satisfactory.

---

MEASUREMENTS

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes, 3 chs. in length, compared with a Lufkin standard steel tape, one chain in length and found to be correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

GENERAL DESCRIPTION.

This township consists of rolling desert land in the eastern portion, the southwest quarter is broken and hilly, and the northwest quarter consists of low rolling hills. The highest point in the township is in section 28, the surface breaking off in all directions from said point. The principal drainage feature, a large, well defined and prominent wash, lies to the west of this high point, and drains northerly through the township. The drainage of the eastern portion of the township is generally to the east.

The soil consists of a gravelly clay loam, for the most part of this township, and is mixed with rock in the hilly parts and with sand in the north and northeast portions, and may be classified as to the whole as second and third rate.

There is practically no timber on the eastern two ranges of sections, but the remainder of the township is covered with a scattering growth of pinon pine and juniper, which becomes heavy in some parts, especially in sections 30, 31 and 32.

The whole of the township is covered with a medium growth of shadscale, yellow top, white sage, sagebrush and greasewood, and also a good growth of grass.

T. 26 S., R. 18 W.

The township affords a very good range for stock, especially sheep, as there is an abundance of and a very good variety of browse feed and a good growth of grass. This country is best suited for winter range.

There are only three sources of water supply in the township. Pine Springs located in the west half of the NW¼SW¼ of section 22, which flows about 1500 gallons daily into a cement cistern, that hold about 4500 gallons. Beers Springs located in the SE¼NE¼ of section 16, has been developed by running a tunnel 40 feet into the side of a hill and piped into a cement cistern with a 4500 gallon capacity. Both of these springs are claimed and developed by Walter James of Blackrock, Utah. A creek, 5 links wide, 2 inches deep, enters the township in the NW¼NW¼ of section 30 and flows north east through sec. 19. It is reported that this stream dries up in late summer or early fall.

There are no indications of coal, oil, or minerals in this township.

There are no settlers on this township at the present time, but there is a habitable house at Pine Springs, owner unknown.

# CERTIFICATE OF UNITED STATES SURVEYOR.
## CADASTRAL ENGINEER and TRANSITMAN

We, Ralph Gentry and H.S.Paul, Cadastral Engineer and U.S. Transitman, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah

bearing date of the 16th day of March, 1921, we have well, faithfully, and our in my own proper person and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of

Independent resurvey of Fifth Standard Parallel South, through Range 18 West; West boundary of T. 26 S. R. 18 W, East boundary of Tp. 26 S., R. 18 W., or Third Auxilliary Guide Meridian West; Subdivisions of T. 26 S. R. 18 W.

of the Salt Lake Base and Meridian, in the State of Utah, which are represented on the foregoing field notes/and date diagram as having been executed by us, and under our directions and that all the corners said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes such survey.

Ralph Gentry
U. S. Cadastral Engineer U. S. Surveyor

Los Angeles Calif.

APPROVAL. Harold S. Paul
U. S. Transitman.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,
Salt Lake City, Utah
June 17, 1924, 19

The foregoing field notes of the survey of Independent resurvey of Fifth Standard parallel south, through Range 18 West; West boundary of T. 26 S. R. 18 W., East boundary of T. 26 S., R. 18 W. or Third Auxilliary Guide Meridian west; Subdivisions of T. 26 S. R. 18 W. of the Salt Lake Base and Meridian, Utah.

executed by Ralph Gentry and Harold S. Paul

under the special instructions dated March 16, 1921, 19--, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the survey they describe, are hereby approved.

U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in , has been correctly copied from the original notes on file in this office.

All lines dated and colored black were surveyed by Chas. F. Moore, U. S. Transitman.

All lines dated and colored red were surveyed by Elmer L. Smith, U. S. Transitman.

Survey commenced July 1, 1923, and executed with Young & Sons transits No. 8570, used by Chas. F. Moore, and Nos. 8589 and 8534, used by Elmer L. Smith, and which were approved by the Asst. Supervisor of Surveys for District No. 6, in Assignment Instructions dated Mav 21, 1923, subject to satisfactory field tests, the record of which appears below.

TESTS OF INSTRUMENTS T. 26 S., R. 19 W

We examine the adjustments of the transits and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations on Polaris, I proceed as follows:

July 2, 1923; At my camp, in sec. 17, T. 26 S., R. 19 W., S. L. B. & M., with transit No. 8589, in approximate latitude 38° 32' N., and longitude 113° 57' W., at approximately 12h 59m a.m., l.m.t., I obs. Polaris at E. elong., with the telescope in the direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground about 8 chs. N. of this station.

At about 7h 00m a.m., l.m.t., I lay off the azimuth of Polaris 1° 25' to the W.. and mark the true mer. thus determined by a nail in a peg firmly driven in the ground about 8 chs. N. of this station.

Test of Transits Nos. 8570 and 8589:

July 2, 1923; At 9h 00m a.m., app.t., we set off 38° 32' on the lat. arcs, and 23° 06' N., on the decl. arcs, the lines defined by the solars coinciding with the true mer.

At app. noon, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb:

| | |
|---|---|
| Mean observed altitude | 74° 33' 00" |
| Reduced latitude | 38° 32' 01" |
| Mean watch time of observation | 12h 41m 52s |
| Watch fast of local mean time | 38m 43s |

At app. noon, with the lat. arcs unchanged, we observe the sun on the mer., the resulting readings of the decl. arcs are 23° 05' N., which agrees with the calculated decl. of the sun.

TEST OF INSTRUMENTS T. 26 S., R. 19 W.

At 3h 00m p.m., app.t., with the lat. arcs unchanged, we set off 23° 04½' N. on the decl. arcs, the lines defined by the solars coinciding with the true mer.

Test of Transit No. 8534:

July 15, 1923; At my same station, at 9h 00m a.m., app.t., I set off 38° 32' on the lat. arc, and 21° 38' N., on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, with the lat. arc unchanged, I observe the sun on the mer. with the solar, the resulting reading of the decl. arc is 21° 36½' N., which agrees with the calculated decl. of the sun.

At 3h 00m p.m., app.t., with the lat. arc unchanged, I set off 21° 35½' N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Tests at all hours suitable for solar observations give results which agree with the true mer., we therefore conclude that the adjustments of the instruments are satisfactory.

The instruments are tested at frequent intervals on true meridians and are personally kept in adjustment throughout the progress of the survey.

Measurements are made with a 5 ch. Lallie Steel Tape, tested by comparison with a Lufkin Standard Steel Tape. Measurements are reduced to true horizontal distances by the use of clinometers.

### GENERAL DESCRIPTION.

The greater part of the township is located in a chain of low lying mountains, known as the Mountain Home Range. The summit of the range is the divide between Hamlin and Pine Valleys. The western third of the township is situated in land ranging from rolling to mountainous in nature.

The mountainous sections of the township are very rough, being thickly covered with fragmentary phorphyry and occasional ledges.

The soil has an intermixture of rocks with occasional outcroppings of porphyry. In the lowlands the soil becomes a sandy clay loam.

The township is unsuited to any kind of profitable pursuit, except stock raising. The rocky nature of the soil and rough steep slopes preclude the possibilties of agriculture.

The entire township is covered with a medium growth of juniper and pinon pine.

The predominant types of undergrowth are, sagebrush, buckbrush, service berry, mahogany, and wild rush. So far as can be learned, no mineral of value, of any ty has been found in the township. The character of the abundant rock is evidence of a volcanic origin.

There is not an abundance of running water found within the township, numerous springs having been developed in the following named sections: Cobble Springs in SE¼ SE¼ sec. 17; Carney Spring in SW¼ SW¼ sec. 35; Small seeping spring in SE¼ SW¼ and Forkie Spring near center of sec. 26; Sand Wash Spring in SW¼ SE¼ sec. 9; Some storage ponds near center of sec. 10; Mountain Home Spring in NE. portion of sec. 3 as indicated by ties in body of these notes; unnamed spring in NE¼ NE¼ of sec. 7

There are no settlers within the township.

The major portions of the township are suitable for grazing, there being an abundance of grass of easy access. There are no indications of mineral or oil.

# CERTIFICATE OF UNITED STATES ~~SURVEYOR~~ TRANSITMEN.

I, Elmer L. Smith Chas. F. Moore and ..... Transitmen, U. S. ~~Surveyor~~, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah bearing date of the 16th day of March, 1921, We have well, faithfully, and truly in our own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of The west boundary and subdivisions, and resurvey of Fifth Standard Parallel South or north boundary of T. 26 S., R. 19 W. ..... of the Salt Lake Base and Meridian, in the State of Utah, which are represented on the foregoing field notes and date diagram as having been executed by us, and under our direction; and that all the corners on said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Bluff, Utah, March 22, 1924 Chas. F. Moore Trans

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 17, 19

The foregoing field notes of the survey of the fifth standard parallel south, thr range No. 19 West; and the survey of the west boundary and subdivisio lines of Township No. 26 South, Range No. 19 West of the Salt Lake Ba and Meridian, Utah;

executed by Chas. F. Moore and Elmer L. Smith

under ~~his~~ special instructions dated March 16, 1921, 191, having bee critically examined, and the necessary corrections and explanations made, the said field notes and the survey they describe, are hereby approved.

E. A. Goreuson
U. S. Surveyor Genera

I certify that the foregoing transcript of the field notes of the above-described surveys in ....., has been correctly copied from the original notes on file in this office.

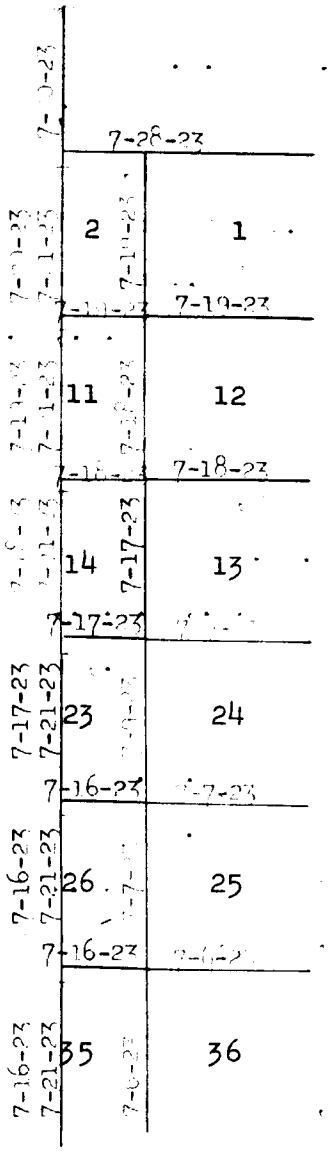
DATE DIAGRAM T. 26 S., R. 20 W.



All lines dated and colored black were surveyed by Chas. F. Moore, U. S. Transitman.

All lines dated and colored red were surveyed by Elmer L. Smith, U. S. Transitman.

---

Survey commenced July 2, 1923, and executed with Young & Sons transits No. 8570, used by Chas. F. Moore, and Nos. 8589 and 8534, used by Elmer L. Smith, and which were approved by the Asst. Supervisor of Surveys for District No. 6, in Assignment Instructions dated May 2, 1923, subject to satisfactory field tests, the record of which appears below.

We examine the adjustments of the transits and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations on Polaris, I proceed as follows:

July 2, 1923; At my camp, in sec. 17, T. 26 S., R. 19 W., S. L. B. & M., with transit No. 8589, in approximate latitude 38° 32' N., and longitude 113° 57' W., at approximately 12h 59m a.m., l.m.t., I obs. Polaris at E. elong., with the telescope in the direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground about 8 chs. N. of this station.

At about 7h 00m a.m., l.m.t., I lay off the azimuth of Polaris 1° 25' to the W., and mark the true mer. thus determined by a nail in a peg firmly driven in the ground about 8 chs. N. of this station.

Test of transits Nos. 8570 and 8589:

July 2, 1923; At 9h 00m a.m., app.t., we set off 38° 32' on the lat. arcs, and 23° 06' N., on the decl. arcs, the lines defined by the solars coinciding with the true mer.

At app. noon, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb:

| | |
|---|---|
| Mean observed altitude | 74° 33' 00" |
| Reduced latitude | 38° 32' 01" |
| Mean watch time of observation | 12h 41m 52s |
| Watch fast of local mean time | 38m 13s |

At app. noon, with the lat. arcs unchanged, we observe the sun on the mer., the resulting reading of the decl. arcs are 23° 05' N., which agrees with the calculated decl. of the sun.

TEST OF INSTRUMENTS T. 26 S., R. 19 W.

CHAINS

At 3h 00m p.m., app.t., with the lat. arcs unchanged, we set off 23° 04½' N., on the decl. arcs, the lines defined by the solars coinciding with the true mer.

Test of Transit No. 8534:

July 15, 1923; At my same station, at 9h 00m a.m., app.t., I set off 38° 32' on the lat. arc, and 21° 38' N., on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, with the lat. arc unchanged, I observe the sun on the mer. with the solar, the resulting reading of the decl. arc is 21° 36½' N., which agrees with the calculated decl. of the sun.

At 3h 00m p.m., app.t., with the lat. arc unchanged, I set off 21° 35½' N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Tests at all hours suitable for solar observations give results which agree with the true mer., we therefore conclude that the adjustments of the instruments are satisfactory.

The instruments are tested at frequent intervals on true meridians and are personally kept in adjustment throughout the progress of the survey.

Measurements are made with a 5 ch. Gallie Steel Tape, tested by comparison with a Lufkin Standard Steel Tape, Measurements are reduced to true horizontal distances by the use of clinometers.

CHAINS

RESURVEY OF THE UTAH-NEVADA BOUNDARY LINE.

### GENERAL DESCRIPTION.

This fractional township ranges from gently rolling in northernmost portion to rough rolling hills in the southern extremity. It has a general northwest drainage, with practically no water within the entire township.

The soil is mostly a sandy clay loam, with an occasional intermixture of fragmentary rock.

The township is unsuited to any kind of profitable pursuit except stock raising. A shortage of water precludes the possibilities of agriculture.

A medium scattering growth of juniper and pinon pine covers practically the whole of the township.

The predominant types of undergrowth are, sagebrush, bunch grass, and wild rush.

So far as can be learned, no mineral of value, of any type, has been found in the township.

There are no settlers within the township.

The major portions of the township furnish fair grazing, there being an abundance of grass of easy access.

TRANSITMEN

# CERTIFICATE OF UNITED STATES ~~SURVEYOR~~

I, Chas. F. Moore and Elmer L. Smith, U. S. ~~Surveyor~~ Transitmen, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah bearing date of the 16th day of March, 1921, We have well, faithfully, and truly in our own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the subdivisions, and resurveyed a portion of the Utah-Nevada boundary and a portion of the Fifth Standard Parallel South or north boundary of T. 26 S., R. 2 ..... of the Salt Lake Base and ..... Meridian, in the State of Utah, which are represented in the foregoing field notes and date diagram as having been executed by us and under our direction, on dates shown on said diagram; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Bluff, Utah, March 22, 1924 Chas. F. Moore Transi

Los Angeles, Calif. March 31, 1924. Elmer L. Smith U. S. ~~Surveyor~~

APPROVAL. U.S.Trans

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 17, 1924

The foregoing field notes of the resurvey of a portion of the Utah-Nevada Boundary line; resurvey of fifth standard parallel south or north boundary and survey of the subdivisional lines of Township No. 26 South, Range No. 20 West of the Salt Lake Base and Meridian, Utah;

executed by Chas. F. Moore and Elmer L. Smith

under ~~his~~ special instructions dated March 16, 1921 ~~191~~, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the resurveys and they describe, are hereby approved.

*U. S. Surveyor General.*

I certify that the foregoing transcript of the field notes of the above-described surveys in ....., has been correctly copied from the original notes on file in this office.

*U. S. Surveyor General.*

Lines in black run by Ralph Gentry, U. S. Cadastral Engineer.

Lines in red run by Harold S. Paul, U. S. Transitman.

T. 25 S., R. 18 W.

Survey commenced July 14, 1923 and executed with Buff & Buff solar transit No. 8028, used by Ralph Gentry, U. S. Cadastral Engineer, and Young & Sons solar transit No. 8573, used by Harold S. Paul, U. S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided with two double verniers, placed opposite to each other and reading to the single minutes of arc, which is also the least count of the latitude and declination arcs and the vertical circle. Unless otherwise specified all lines were run on meridians established with the solar attachments.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 2[illegible], 1923, conditional upon satisfactory field test.

July 15, 1923, in our camp in section 16, T. 25 S., R. 18 W. of the Salt Lake Base and Meridian, in approximate latitude, 38° 38' N, and longitude, 113° 48' W., I examine the adjustments of both instruments and correct all errors. I compare the solar apparatus by their indications hourly with a meridian established by Polaris observartion as follows:

At the same station, July 15, 1923, at 8h 18m 32s p.m. by my watch, which I found to be 30m 22s fast of local mean time by a meridian observation this same day. I observe Polaris west of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground, about 10 chs. N.

Watch time of observation, mean of four readings 8h 18m 32s p.m.

Watch fast of local mean time 30m 22s.

Local mean time of observation is 7h 48m10s p.m.

Azimuth of Polaris is 0° 34' W. of meridian.

T. 25 S., R. 18 W.

This observation was taken with Buff & Buff solar transit No. 8028, used by Ralph Gentry.

July 15, 1923, at the same station, at 8h 0m a.m. apparent time, using Buff&Buff solar transit No. 8028, I set off 38° 38' N. on the latitude arc, 21° 38½' N. on the declination arc, and determine a meridian, and mark a point in the meridian thus determined by a nail in a hub, firmly driven in the ground, about 10 chs. N. of my station. Then with Young & sons solar transit in the meridian thus determined, we set off 38° 38' N. on the latitude arc, and 21° 38½' N. on the declination arc, and determine a meridian, which we find to agree with the meridian determined, with solar attachment of Buff & Buff solar transit No. 8028.

At apparent noon, using Buff & Buff solar transit No. 8028, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's W. limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's E. limb.

| | |
|---|---|
| Mean observed altitude | 72° 58' 45" |
| Reduced latitude | 38° 37' 56" |
| Mean watch time of observation | 12h 36m 02s |
| Watch fast of local mean time | 30m 22s |

At apparent noon, with both instruments in the meridian and the latitude arcs unchanged, we find the reading of the declination arcs to be 21° 37' N., which agrees with the computed declination of the sun.

At 4h 0m p.m. apparent time, with the latitude arcs unchanged, we set off 21° 35½' N. on the declination arcs and determine meridians with the solar attachments, which we find to agree with the true meridian.

As all of the solar observations made during the usual hours of solar work come within 1' of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

July 16, 1923, at the same station, 7h 0m a.m. using Buff & Buff solar transit No.8028, over the same station, that Polaris observation was taken, I lay off 34' to the east from the mean point established from Polaris observation, and find the meridian thus deter-

to agree with the meridian established by solar attachment of Buff & Buff solar transit NO. 8028; therefore I conclude that the meridian and tests of instruments are satisfactory.

## MEASUREMENTS.

Un less otherwise specified, all measurements are made with Lallie steel ribbon tapes, 5 chs. in length, compared with a Lufkin standard steel tape, 1 ch. in length and found to be correct. The measurements are made on the slope, the vertical angles determined and and the slope measurements properly reduced to true horizontal distances.

## FINAL TEST OF INSTRUMENTS.

For final test of instruments at the completion of the survey see field notes of T. 25 S., R. 19 W., under the heading of Test of Instruments.

## EAST BOUNDARY OF T. 25 S.; R. 18 W.

GENERAL DESCRIPTION.

---

This township consists of gently rolling valley land in the west four ranges of section and rolling hilly land in the east two ranges of sections. The west half of the township has a general drainage to the east and NE., and the east one half of the township drains in all directions from a low spur divide that projects in a northerly and southerly direction thru the township.

The soil consists of a gravelly, sandy, clay loam, that may be termed as second rate.

The timber consists of juniper and pinon pine, and is only found along various portions of the West Boundary, and in scattering clumps through out the township

T. 25 S., R. 18 E.

and in the portions that it is found it is very scattering. The whole of the township is covered with a medium growth, of white sage, yellow top, shadscale, bunch grass and grease wood, which affords fair grazing for stock. The grazing is best adapted for winter range as there is no water on this township.

There are no settler, and no improvements on this township.

No indications of coal, oil, or minerals were found.

CADASTRAL ENGINEER

# CERTIFICATE OF UNITED STATES SURVEYOR AND TRANSITMAN.

We, Ralph Gentry, U. S. Cadastral Engineer, and Harold S. Paul, U. S. Transitman, do ~~U. S. Surveyor~~, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah bearing date of the March day of 16th, 19 21, I have well, faithfully, and to the best of our in my own proper person and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of East Boundary, West Boundary, North Boundary and Subdivisions of T. 25 S., R. 18 W

of the Salt Lake Base and Meridian, in the State of Utah, which are represented by the foregoing field notes and date diagram as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Salt Lake City, Utah, April 24, 1924. Ralph Gentry
U. S. Cadastral Engineer

Los Angeles, Calif. Apr. 26, 1924 Harold S. Paul
U. S. Transitman

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 17, 1924

The foregoing field notes of the survey of the east, west, nd north boundaries and subdivisional lines of Township No. 25 South, Range No. 18 West of the Salt Lake Base and Meridian, Utah

executed by Ralph Gentry and Harold S. Paul

under his special instructions dated March 16, 19 21, having been critically examined, and the necessary corrections and explanations made, the said field notes and the surveys they describe, are hereby approved.

U. S. Surveyor General.

I certify that the foregoing transcript of the field notes of the above-described surveys in ..... has been correctly copied from the original notes on file in this office.

U. S. Surveyor General.
